

Damon Q

Helen presented at 17 years with a mildly crowded and slightly protrusive dentition

Treatment was complete after 12 months using the Damon Q system with extractions.

Helen was delighted with her result.

Helen

Mildly crowded upper and lower arches. A degree of bimaxillary proclination was present, which indicated that extractions would be necessary.

Dr Horobin used the Damon Q system.

Damon Q system was fitted.

Progress after 2 months.

Progress after 5 months.

Progress after 11 months.

Finished result.

Upper Arch Progress

Lower Arch Progress
