Enjoy a carefree smile

normal brackets

lingual brackets

fig. 1

fig. 2

Perfectly concealed from view

Usually, brackets and archwires are placed on the outer surfaces of the teeth (fig. 1). As they are visible when talking or smiling, patients often feel insecure.

Now there is an alternative – the so-called lingual technique. This allows the whole apparatus to be secured to the inner surfaces of the teeth which conceals it from the outside (fig. 2).

Invisible force

As lingual brackets are bonded onto the inner surfaces of the teeth, the apparatus is inside the mouth (fig. 3). The effect is virtually the same as when using the normal bracket technique, the only difference being that the force is applied from the opposite side.

Due to their very flat design, 2D[®] lingual brackets differ from conventional lingual brackets. They are barely noticeable to the patient and provide the best invisible patient comfort. All that remain visible are the successful results of the treatment!

fig. 3

Attractive teeth - right from the start

When using 2D® lingual brackets for the treatment, the successful outcome becomes apparent very quickly.

The bracket is bonded close to the centre of resistance of the tooth where its force is applied directly.

For perfect aesthetics - and only you know what is behind it.

Effective, aesthetic treatment

Invisible brackets – visible success

All types of orthodontic treatment aim to align teeth rapidly and visibly.

But the required appliance need not be visible. Whether talking, smiling or even flirting - with these concealed lingual brackets from Forestadent® you can live your everyday life absolutely carefree.

It's your choice

Modern orthodontic treatment also provides adults with options for correcting misaligned teeth successfully – discreetly and virtually invisibly. For more information about aesthetical tooth alignment, please ask your orthodontist.

2D® Lingual brackets

- are **concealed from view** as they are bonded to the inner surfaces of the teeth
- **are hardly noticeable** as they are the flattest lingual brackets on the market at the moment
- provide for **rapid treatment** success as the forces are applied directly
- ensure **short treatment times** due to easy handling
